

Better Pant™

Only available from Graykon Scientific

Better Pant™ is both a re-usable brief and convenient comfortable leg bag holder without irritating straps.

Designed to be used with most urinary collection systems (standard catheters, condom catheters, and ileoconduits) using 500ml and some 1000ml leg bags.

Better Pant™ is an undergarment with an internal pouch that conceals and securely holds the external collection system in place without leg straps, which is better for circulation to the lower leg.

Persons using Better Pant™ are able to do more physical activities without the leg bag dropping down the leg.

Better Pant™ has been used by ambulatory, paraplegic, quadriplegic and non-ambulatory men.

Better Pant

COMFORTABLE & EASY TO USE

1. Turn Better Pant™ inside out.
2. Place leg bag inside pouch so that it lies flat.
3. Pull release valve through lower opening in pouch.
4. Connect tubing to leg bag (Note: measure length of tubing to fit between the receiving valve on leg bag and sheath, add 1' to 3", then cut tubing to this length.)
5. Put sheath on.
6. Turn Better Pant™ right side out, pull on, and connect tubing to sheath.

Material: Cotton/Spandex – Latex Free – Very light and comfortable

Testimonials:

"This new garment is great! Much more comfortable than leg straps."

"I don't have to wear diapers any more." (Post prostate patient.)

"We can use this undergarment for our patients in the nursing home and also use it when driving them to a doctor's appointment. (RN in nursing home)

"I can use this when I travel." (Non-ambulatory – in wheelchair).
