

Cliny Catheters from Create Medic

Easier on the Body : the Medicine of the Future
CREATE MEDIC CO.,LTD.

Silicone, the raw material from which our products are made, is widely known for its biocompatible properties. Soft as rubber, it causes a patient less stimulation and is "kind to the body".

Urological Products

The urological system is composed of those organs, which excrete harmful materials that are no longer required by the body and pass them outside in the urine. For a patient who is suffering from a disease of the kidney or bladder, has neurological disorder, or finds it difficult to discharge urine in case of post-operation, urine needs to be extracted through a catheter.

Our urological products are used both in the hospital and the home.

Indwelling catheter related products

The catheter is used to withdraw urine, inserted into the bladder along the urethra in case of urination difficulty after an operation. Clinly catheters now hold the largest market share for this type of product in Japan. They are used in EU bloc and other countries all over the world.

Nephrostomy related products

These catheters are designed to be retained percutaneously in the kidney and allow withdraw of urine in case of blockage in the urinary duct due to symptoms such as posterior renal insufficiency.
